

Michigan State University W.K. Kellogg Biological Station

Mission Statement

Development of programs in research, education and extension directed toward a comprehensive understanding of natural and managed terrestrial and aquatic systems, and the interdependence of these systems for conservation of natural resources.

Programming to support the mission:

- Support and maintain strength in basic ecological research and training.**
- Establish an innovative agricultural program based on sound ecological principles that optimize the goals of agricultural profitability and environmental quality and social acceptability.**
- Foster an environment for interdisciplinary research and exchange of knowledge concerning ecology, agriculture, natural resources and the environment.**
- Maintain an active outreach program to educate, explain and promote the activities of the Station and to keep the public informed and involved in the general area of environmental quality.**
- Conduct an integrated education program in ecology, agriculture, natural resources and the environment emphasizing field and laboratory experience.**
